

What can you do on a feature or basic phone?

What can you do on a PC or laptop?

What can you do on a smartphone?

Download

To copy a package of information (such as a file or application) from the Internet on to a computer or mobile device.

Installation

To save a file or application on your computer or mobile device. This is what happens, usually automatically, once you have downloaded the file of application from the Internet.

3G/ 4G
(third generation, forth generation)

These are standards or ways that we connect our mobile phones to the Internet. If you are connected to the mobile Internet (but not through Wi-Fi) you should see a 3G or 4G sign at the top of your mobile screen.

Password

This a secret phrase or word that only you know – and is used to sign-in to online accounts, such as email or Facebook .

App (application)

A piece of software designed for specific function, this is usually downloaded to mobile device.

Operating System

The base software which lets you communicate with the supports your computer or mobile phone's functionality and lets you to communicate with it, like an intermediary inside the phone. Android is one such operating system.

Register

To record a profile of yourself in the app (usually an email address or username and then password) so that you can save your activities and progress, and continue each time you come back.

Log in/ Sign in

To enter your name/ email and password when you come back to an app, so you can returned to your previous activities.

Remixing

to create a version of a project, based on the original, but incorporating new elements.

Links

Website references in a webpage or electronic document which let you display or connect to another document or webpage.

URL

(Uniform Resource Locator) is the address of any document, file or website available on the internet. Examples include www.facebook.com and www.bbc.com

Open source

To refers to computer software, like Webmaker, where the source code is made 'open' so that anyone may view, change or distribute a version of the software for any purpose.

Sharing

How we distribute our thoughts, feedback and projects over the internet. We share them through comments, web projects and updates.

Non-linear navigation

A multi-directional way of formatting Webmaker projects or websites to tell a dynamic and illustrative story. This is how projects or websites can take you in lots of different information directions.

RGBA and #
(tinker mode)

(Red Green Blue Alpha) is a colour palette, and way of adjusting or 'tinkering' with this colour palette through increasing or decreasing different amounts of colour

Topic 1: The Internet

End of class test

Can all phones access the Internet?

What are two things you can do with the Internet?

Topic 2: Publishing online

Evaluation test

<i>Eg. Malik</i>									

To evaluate this activity, write the name of the learner on the left-hand column, and after 30 minutes of running the final activity, tick the boxes that each learner has completed. Repeat this at 60 minutes also, it should give you a clear indication of each individual's progress. Take note of those moving more slowly, and help guide them along.
